

TURKEY-TANGLE FROGFRUIT

Phyla nodiflora

Frogfruit can be used as an excellent ground cover and is evergreen in warm years and in areas protected from frost. It spreads vigorously and prefers at least a half day of sun. Frogfruit has a very long flowering season and is a good nectar plant for bees and butterflies as well as a host plant for special species including the common Buckeye. It is an attractive plant rambling over boulders or the edges of hanging baskets. It also can tolerate salt, drought and flooding.
